Profile

I consider myself as the JavaScript full-stack developer. I like to know new technologies and frameworks and during the years I gained a lot of experience with JavaScript frameworks and libraries like Angular and React.

The last mentioned is my favorite. I am using it on the front-end whenever possible with NextJs framework for SSR or together with webpack for SPAs. As a full-stack JavaScript developer I create my back-end with NodeJs framework ExpressJs. For a database I am using PostgreSQL or MongoDB the most. For client/server communication I create GraphQL or Rest apis, but I prefer to use GraphQL.

I am pretty aware of TypeScript for bring strict types to software development in JavaScript, Redux, Apollo client or React context api for client state management, For styling I've used less, sass and styled-components with bootstrap or material-ui, google fonts and icons library like FontAwesome. In the spare time I experiment with other languages like C# for Unity 3D or dart for Flutter.

Employment History

Oct 2023 - Jul 2024

ThreeJs developer

Auglio

I worked as a Threejs developer, solving complex problems with computer graphics in the 3D world of Threejs on further improving the existing solution of Virtual Glasses Try-on product.

Jan 2021 - Jan 2024

Senior Full-stack Developer

Virtual Dom

I've been responsible for creating a furniture aggregator with Augmented Reality as competitive advance as a feature. I've developed backend api solution where I used nodejs graphql and postgresql, I've created the aggregator's website and its multiple redesigns and I've also created react-native app with AR for both platforms Android and iOS which I've been maintaining and further developing all the solutions during the years of 2021 to 2024

March 2020 - Feb 2021

React Native Developer

Quizana

I've created react native app. from scratch for a trivia social network Quizana for both platforms android and iOS. The app consists of a lot of trivia online games, polls, quizzes, chat, feed and a lot more. Except the initial app setup and further develop it's features I've also work on two redesigns of the app during my stay at Quizana.
